[Airaid Synthaflo and Synthamax Air Filters](#)

## Airaid Synthaflo and Synthamax Air Filters

AIRAID® Premium Filters are hand-built and each AIRAID® Premium Air Filter comes with a Lifetime Guarantee. Each AIRAID® Synthaflo air filter starts with multiple layers of material combined with a unique filtration technology used to trap the tiniest particulates that ordinary cotton-gauze filters can't capture.

AIRAID® has two types of premium air filters the Synthaflo air filter and the Synthamax air filter. Both air filters are designed using quality material, but the Synthaflo air filter uses oil to help trap particulates with multiple layers of cotton gauze while the Synthamax air filter does not use oil and uses all synthetic material. Both of these air filters are sold in the [Airaid Cold Air Intake Systems](#), [Airaid Replacement Air Filters](#), [Airaid Junior Intake Kits](#), and [Airaid Intake Kit Replacement Air Filters](#). Airaid Synthaflo and Synthamax air filters come with a lifetime no hassle warranty, they are both washable air filters and last the life of the car.

SynthaFlow is Airaid's original oiled air filter design. They use multiple layers of cotton gauze combined with the Synthaflo layer, a unique synthetic material, to catch almost twice as many particulates as the traditional paper air filters. These layers of material are formed and held in place by a durable epoxy coated wire mesh with a unique ridge design. These ridges and valleys in the air filter are then coated with AIRAID's air filter oil to help catch even more particulates. The oil is applied after cleaning the filters every 30K - 50K miles with [AIRAID's air filter cleaner](#).

The Synthamax air filter has two layers, an inner and outer layer of wire mesh for durable support of filtration which helps prevent the air filter from collapsing under high air flow. The inner layer consists of two layers of synthetic materials that both provide outstanding air flow (low restriction) and high filtration. Particulates are first trapped in the outer layer of synthetic needlefelt polyester material designed for wet and dry filtration with high air flow capacity. The inner layer of (wet-laid / chemical bonded) (rayon / polyester) captures any remaining particulates while maintaining high air flow and low restriction. The AIRAID® Synthamax air filter is made completely of synthetic fibers, is washable and does not need to be oiled which makes clean up easier. The true benefit to this air filter is its lifetime no hassle warranty and Airaid's unique filter design.

### Difference between Synthaflo and Synthamax Air Filters

- **Oiled**
- **Multiple Layer of Cotton Gauze Material**
- **Allows 820 cfm Through the Air Filter When New**
- **Washes with Airaid filter cleaner**
- Washable and Reusable
- Made in the U.S.A.
- Lifetime No Hassle Manufacturer Warranty

- **Non-Oiled**
- **100% Synthetic**
- **Allows 542 cfm Through the Air Filter When New**
- **Colorfast die will not fade**
- **Washes with regular household detergents**
- Washable and Reusable
- Made in the U.S.A.
- Lifetime No Hassle Manufacturer Warranty
